Security Assessment:

We have identified potential security issues in the libraries this project is using. You can find all the details in the security assessments below. While your code might not expose you to the security threat at the moment, it's recommended to go through each of them and update your libraries to a non-vulnerable version.

Score: 0

Stability Assessment:

There are new patch releases available for one or more of the project dependencies declared in this project. You will find all the details in the stability section below. It is recommended to update your dependencies to the latest patch release to benefit of all the latest bugfixes. While you are looking at it, consider also having a look at the new minor and major releases (in the same table) that can offer you more advanced features.

Score: 48

Licensing Assessment:

Our analysis shows that at the moment this project code does not violate any of the licensing policies that were provided.

Score: 100

Library (nodejs)

acorn - 6.4.0

Severity: **MEDIUM**

Description:

Affected versions of acorn are vulnerable to Regular Expression Denial of Service. A regex in the form of `/[x-\ud800]/u` causes the parser to enter an infinite loop. The string is not valid UTF16 which usually results in it being sanitized before reaching the parser. If an application processes untrusted input and passes it directly to acorn, attackers may leverage the vulnerability leading to Denial of Service.

More Info:

- <https://github.com/acornjs/acorn/issues/929>
- <https://github.com/acornjs/acorn/commit/793c0e569ed1158672e3a40aeed1d8518832b802>

- <https://nodesecurity.io/advisories/1464>

Hierarchy:

backEnd:1.0.0
cryptiles:3.1.4

Description:

Prototype pollution attack. hoek node module before 4.2.0 and 5.0.x before 5.0.3 suffers from a Modification of Assumed-Immutable Data (MAID) vulnerability via 'merge' and 'applyToDefaults' functions, which allows a malicious user to modify the prototype of "Object" via proto, causing the addition or modification of an existing property that will exist on all objects.

More Info:

- <https://hackerone.com/reports/310439>

Hierarchy:

backEnd:1.0.0

unirest:0.5.1

hoek:2.16.3

Description:

Versions of "hoek" prior to 4.2.1 and 5.0.3 are vulnerable to prototype pollution.

The "merge" function, and the "applyToDefaults" and "applyToDefaultsWithShallow" functions which leverage "merge" behind the scenes, are vulnerable to a prototype pollution attack when provided an unvalidated payload created from a JSON string containing the "proto" property.

This can be demonstrated like so:

```
var Hoek = require('hoek');
```

```
var maliciouspayload = '{"proto":{"oops":"It works !"}}';
```

```
var a = {};
```

```
console.log("Before : " + a.oops);
```

```
Hoek.merge({}, JSON.parse(maliciouspayload));
```

```
console.log("After : " + a.oops);
```

This type of attack can be used to overwrite existing properties causing a potential denial of service.. Recommendation: Update to version 4.2.1, 5.0.3 or later.

More Info:

- <https://nvd.nist.gov/vuln/detail/CVE-2018-3728>
- <https://nodesecurity.io/advisories/566>

Hierarchy:

unirest:0.5.1

hoek:2.16.3

jquery - 3.4.1**Severity: MEDIUM**

Description:

Passing HTML containing <option> elements from untrusted sources - even after sanitizing it - to one of jQuery's DOM manipulation methods (i.e. .html(), .append(), and others) may execute untrusted code.

More Info:

- <https://jquery.com/upgrade-guide/3.5/>
- <https://github.com/advisories/GHSA-jpcq-cgw6-v4j6>
- <https://nvd.nist.gov/vuln/detail/CVE-2020-11023>

Hierarchy:

backEnd:1.0.0
jquery:3.4.1

jquery - 3.4.1**Severity: MEDIUM**

Description:

Regex in its jQuery.htmlPrefilter sometimes may introduce XSS

More Info:

- <https://blog.jquery.com/2020/04/10/jquery-3-5-0-released/>

Hierarchy:

backEnd:1.0.0
jquery:3.4.1

kind-of - 3.2.2**Severity: MEDIUM**

Description:

ctorName in index.js in kind-of v6.0.2 allows external user input to overwrite certain internal attributes via a conflicting name, as demonstrated by 'constructor': {'name':'Symbol'}. Hence, a crafted payload can overwrite this builtin attribute to manipulate the type detection result.

More Info:

- <https://nvd.nist.gov/vuln/detail/CVE-2019-20149>
- <https://github.com/jonschlinkert/kind-of/issues/30>
- <https://github.com/jonschlinkert/kind-of/pull/31>

Hierarchy:

backEnd:1.0.0
object.map:1.0.1
make-iterator:1.0.1
kind-of:3.2.2

kind-of - 6.0.2**Severity: MEDIUM**

Description:

Versions of "kind-of" 6.x prior to 6.0.3 are vulnerable to a Validation Bypass. A maliciously crafted object can alter the result of the type check, allowing attackers to bypass the type checking validation. . Recommendation: Upgrade to versions 6.0.3 or later.

More Info:

- <https://github.com/jonschlinkert/kind-of/issues/30>
- <https://nodesecurity.io/advisories/1490>

Hierarchy:

backEnd:1.0.0
kind-of:6.0.2

knex - 0.15.2**Severity: HIGH**

Description:

knex.js versions before 0.19.5 are vulnerable to SQL Injection attack. Identifiers are escaped incorrectly as part of the MSSQL dialect, allowing attackers to craft a malicious query to the host DB.

More Info:

- <https://nvd.nist.gov/vuln/detail/CVE-2019-10757>
- [CVE-2019-10757](#)

Hierarchy:

backEnd:1.0.0
knex:0.15.2

mime - 1.3.6**Severity: HIGH**

Description:

Affected versions of "mime" are vulnerable to regular expression denial of service when a mime lookup is performed on untrusted user input.. Recommendation: Update to version 2.0.3 or later.

More Info:

- <https://github.com/broofa/node-mime/issues/167>
- <https://nodesecurity.io/advisories/535>

Hierarchy:

backEnd:1.0.0
unirest:0.5.1
mime:1.3.6

Description:

Affected versions of "minimist" are vulnerable to prototype pollution. Arguments are not properly sanitized, allowing an attacker to modify the prototype of "Object", causing the addition or modification of an existing property that will exist on all objects.

Parsing the argument "--proto.y=Polluted" adds a "y" property with value "Polluted" to all objects. The argument "--proto=Polluted" raises an uncaught error and crashes the application.

This is exploitable if attackers have control over the arguments being passed to "minimist".

. Recommendation: Upgrade to versions 0.2.1, 1.2.3 or later.

More Info:

- <https://github.com/substack/minimist/commit/4cf1354839cb972e38496d35e12f806eea92c11f#diff-a1e0ee62c91705696ddb71aa30ad4f95>
